COMPANY PROFILE

Geneza Ltd. is 100% privately owned Limited Liability Company. At our facility in Krakow, Poland we develop and manufacture temperature and humidity measuring equipment. We have been on the market since 1990 and we have earned very good reputation by our long term cooperation both with the small and most prestigious corporations, companies, technical universities and research centres as well.

Our meters, probes and sensors have broad application in process engineering, pharmacy, food managements, air conditioning systems, water boilers, refrigerators, meteorology and environmental research, hydroelectric plants, woodworking industry, and many others users in experimental and research facilities.

Specifically, we offer:

- Pt-100 and Pt-1000 platinum temperature probes
- temperature and relative humidity measurements products
- temperature, humidity and microprocessor and PC based dataloggers
- research and development in electronics, sensor and probes
- projecting, designing and manufacturing sensors, probes and transmitters for high technology industry, universities, agriculture, pharmacy and food industry

Also, due to our experience and our laboratory equipment we have been registered at the Regional Kraków Branch of the National Measurement Office as **traceable to the national and international standards. All tests are documented on the official certificates of the traceability.** Most of our clients have **ISO-9000, HACCP or even GMP certificates.**

If you need further details, please do not hesitate to call or write us.

Yours faithfully,
Dr Bogusław Herod,
President
